Engine Estimate - Final Update and Specification

As I am beginning the rebuild of your engine we agreed that it would be helpful to review the specification and parts required as it has evolved somewhat over time.

My 2 previous estimates are still the basis for the rebuild but it is helpful to both of us to have it summarised on 1 piece of paper.

Using the 356C bottom end purchased from me the aim is to provide a reliable and flexible engine with an output of around 115bhp as originally intended you would need the following parts.

Parts:

Shasta 86mm Piston & Barrel Set - £800

Solex PII40 Carburettors - Rebuilt £550

Full Flow Oil System - £125

Neutek SX1 Cam Shaft - £225

Aluminium Oil Cooler - £280 (the price has increased recently)

Distributor - Bosch 050 no longer available but new RSR0012 is better but slightly more expensive £185

Pushrods - good used 912 £80

Top & Bottom Gasket Sets - £88.00

Pushrod Tubes - £72

Main Bearings 0.25us -£175

Rod Bearings 0.25us - £53

Valve Springs - £90

New 200mm Flywheel - £ 245 -

Spark Plug Leads - £37

Spark Plugs £10

Ignition Coil - £39

Dynamo - see comments on original estimate and still allow £300

Used set of late type Valve Gear - £300 (includes valves)

New Valves - £200

Con Rod Nuts - £34

Good used Crank Pulley - £35

Engineering:

Cylinder Heads - Allow £350 for reconditioning as original estimate

Re-grind crankshaft 0.25us £110

Balance crank assembly - £65

Vapour Blasting - £125

Re-size and crack test conrods - £45

Labour:

As previous estimates

You should still set aside a contingency as outlined in my previous estimates

The cylinder heads and crankcases are already with the engineering company and many of the other parts are already in stock or on order.

Hope that this is helpful.

Regards

Andy

1st April 2004

Porsche 356 Engine - Estimate

I promised to write and outline the costs the build a rally specification engine for your 356A.

My understanding from our various discussions is that you are looking for a strong flexible engine that will perform well in normal road use, long distance events and rally's.

The basis of the engine is very important; as the early engines are simply not strong enough to take a significant increase in power reliably. The only option for a 100bhp + engine is a late crankcase, crankshaft and con rods. You will also need some late type SC or 912 cylinder heads. These components will give long service and can easily cope with an increase in power.

This estimate is for a circa 110-115 BHP engine with good torque.

As you know I have a late 356C bottom end that I have now stripped down. The case is in very good condition. It has a crankshaft that is on its standard size, late type forged cam followers and the strongest Porsche '01' conrods. It also has a good oil pump and crank gears. It would be a very good starting point for your engine. Individually sold these parts would easily fetch over £1400. As I told you when you visited in its unknown condition I was prepared to sell this bottom end for £500. I am still prepared to sell it to you at a preferential price but it has to reflect its condition and the time I have invested in stripping it down. The best price would be £650.00

You will also require a set of heads. Reconditioned SC/912 heads are expensive and cost between £800-£1200 for a pair. I have a set of used heads that require reconditioning and would sell you these for £300. You should then budget around £350 to recondition them with new guides cut seats etc. A set of new valves and used valve gear would add between £200 - £400. If you are lucky you may find some on ebay or I can see if I can sort you out a set from my parts stock.

For pistons/barrels you have 2 choices. The 86mm (9.25:1CR) piston/barrel set will give you a capacity of 1720cc with a slight improvement in torque. This is of course illegal in certain events, as it would take you out of the 1600cc class. Many events now have a 1600 -2000cc class and unless you are intending to do serious FIA events they should not be a problem. Alternatively a set of 83.5mm (9.25:1CR) pistons can be used with a set of 356 iron barrels that are re-bored to suit. This results in 1621cc engine, which is legal as 83.5mm was the maximum overbore offered by Porsche. You probably have a set of iron barrels on your old 356A engine that could be re-bored and used.

The 86mm set complete is £800.00 and the 83.5mm piston set is £575.00 and £120 for re-boring the barrels.

The carburettors are the last major factor in a performance engine. Again you have some choices between original style Solex or aftermarket Weber or Dellorto. If you are intending to use the car in FIA or other sanctioned events then the Solex is the obvious choice, as some organisers will not accept the Weber or Dellorto's as they were never standard equipment on a Porsche. The Solex is a great carburettor as well. A good used pair of carburettors is £200 and getting them fully refurbished to 'as new' condition/specification is £350.

A full flow oil system is essential. Again you have some choices but the most cost effective way would be my conversion, which cost £125 complete and will allow you to use a cable driven rev counter. If you are going to convert to an electric rev counter you could use either the self contained or remote full flow systems made by Precision Matters - both can be viewed on my Website.

Other Parts required:

Cam Shaft - I would definitely advise the Neutek SX1 as it is designed to use with the Solex carburettors and results in a strong and quiet engine. You could go for a regrind and although the performance would be similar to the SX1 they tend to make more noise because the base circle is reduced when they are ground. The SX1 is £225 and the re-grinds start at £155

Oil Cooler - An alloy cooler would provide more cooling and puts less stress on the crankcase - £250

Distributor - Bosch 050 @ £125

Pushrods - a good used set of SC or 912 will cost around £80.00

Gasket Sets - Top and bottom end gasket sets are £88.00

Pushrod tubes - £72 for a set of 8

Main Bearings - £160 - £250 depending on size and type*

Rod Bearings - £45 - £65 depending on size and type*

*You are likely to be at the lower end of price range

Valve springs - £90 for a set of 8

A new flywheel may be required - a 200mm flywheel is £225.00

Engineering - you should budget around £250 to cover crank grinding, balancing etc.

Vapour blasting and sand blasting of parts is going to cost approx £185

Powder coating the tinware is £125.00

Depending on what your old engine can provide you may have to allow for some ancillaries like a dynamo, ignition coil etc. A budget of around £300 should cover this and includes the cost to convert to 12V.

£100 will cover the cost of spark plugs, leads, seals etc

This estimate assumes that the tinware from the existing engine is reused.

The labour to co-ordinate the engineering, strip your 356A engine and rebuild the new engine will take between 65-75 hours @ £35PH. ~~£2,275~~ - ~~£2,625~~

Depending on the option that you choose this will take the cost of a completed engine to between £7170 and £8005. I must stress that this gets you an engine built to your specification in almost new condition. I will warrantee the engine against any defects in new parts supplied by me and workmanship for a period of 1 year or 6000 miles whichever is the soonest.

You do of course have almost unlimited other options for your existing engine using a mix of parts from it and the late bottom end I have offered you. Using the bottom end together with your early heads and Zenith carburettors you would have an engine as strong and with very good power and torque. I find that most people are focussed on BHP but I can assure you that a standard Super engine with minor modifications will produce 80-90bhp with great torque. By using the late bottom end you would address the long-term reliability issues and in a car as light as a 356A it would hold its own with any 356. An engine like this could be built for around £6000.

All prices are plus VAT.

When I look at the car again I will be able to see what clutch options you have (there were a couple used in 1959!)

I know that I have given you a lot to think about and that the cost is a major factor. Have a good look at what I have said as a starting point and we can move forward towards agreeing a specification and budget to suit your requirements.

If you want to move forward we should get your original engine and strip it to access its condition and establish what parts can be re-used.

Please do not hesitate to come back to me if you require any further information or clarification.

Yours sincerely,

Andrew Prill

4th May 2004

Porsche 356 Engine - Estimate Update

Based on your decision to purchase the good used 356C bottom end and cylinder heads an invoice for which is enclosed, I have updated your estimate with the costs to build it into the type of engine we have been discussing.

Engineering -

The crankshaft will be ground 0.25mm undersize - £110.00 ✓

Crankshaft Balancing - £65.00 ✓

Reconditioning of cylinder heads to include cleaning, new guides, new or re-faced seats, flycutting etc £350 (this is a maximum which may reduce when the heads are stropped and examined)

Full flow oil conversion of crankcase including all fittings and pipe work £125.00 ✓

Carburettor reconditioning - £350.00 ✓

Vapour Blast Crankcase & Heads - £125.00 ✓

Parts -

Shasta Design 86mm (9.25:1CR) piston and cylinder set complete - £800.00 ✓

Good used Solex PII40 carburettors - £200 pair ✓
Used Late Rocker Gear - £250 (estimate - I need to look in my stock)

Valves 4 inlet, 4 exhaust - £200 ✓

Cam Shaft - Neutek SX1 - £225.00 ✓

Oil Cooler - aluminium £250.00 ✓ + 30

Bosch 050 Distributor - £125.00

Good used 912 pushrods - £80.00 set ✓

Top & Bottom end gasket sets - £88.00 ✓

Pushrod Tubes - £72.00 ✓

Main Bearings 0.25us - £175.00 ✓

Rod Bearings 0.25us - £53.00 ✓

Valve Springs - £90 set ✓

200mm Flywheel - NOS £265 (the price has just increased) - 20

Spark Plug Leads - £37.00 ✓

Spark Plugs - £10.00 ✓

Ignition Coil - £39.00 ✓

Labour -

As before - 65-75 hours @ £35PH

This leaves a few outstanding items such as the clutch and dynamo, which we can sort out as we go along.

You should budget a small contingency of say £350 to cover any unforeseen work or missing parts. This will only be spent with your permission. As you are doing some of the work like the tin ware we will be in regular communication as the engine build progresses.

If this estimate is acceptable I will send the case and heads away for cleaning prior to them going for the various engineering required.

I look forward to hearing from you.

Yours sincerely

Andrew Prill

re Porsche 356A Chassis No 107217

Colour: Gulf Blue

Received with thanks from Paul Aslett the sum of £4910.00 for services rendered as per the attached estimate.

Many thanks

Bruce Cooper

Hi Paul

I hope your return journey was uneventful, thanks for taking the time to visit us on this rather mad and manic day.

Ok, furthering our discussion regarding costs of finishing the bodywork on the Rob Dickenson 356, as discussed your intentions are to build a high quality street/rally type car which is not dependant on being 100% correct in every detail, clearly this would have to be the case bearing in mind the existing modifications to the shell. The engine bay would be cleaned back [currently it has a coat of etch primer which was applied to hold back surface corrosion] to a satisfactory substrate but not bare metaled as this isn't necessary for you purposes. Once cleaned back and primed the sensible next move would be to seal and coat with a sound deadening sprayed coating which is a good basis for either painting and leaving or applying sound deadening pads to.

The under bonnet luggage area would be as discussed i.e., remove old sound deadening, clean back to sound substrate, prime, seal and finish with SKS spray able sound deadening material, with the exception of tank support panel and chassis number panel which not carry the textured coating, then refinished using 2k satin black finish.

The interior would be completed as started IE, fully refinished to accept lightweight trim using 2k finish of your choice, body colour strikes me as sensible although the choice is yours. Please bear in mind that the interior is not standard.

the underside would be much as the car you briefly looked at on the roll over frame whereby the underside is cleaned back of all loose coatings, all underside coated with red oxide primer, all joints sealed, then underside fully coated using SKS anti gravel- sound deadening finish. This finish can be left without further attention although it does benefit from a light coating of underbody wax if not fully refinished,

This is where I have to gauge the quality of our existing efforts against your needs, initially the car would have been flatted back to remove much of the primer you saw today, in this way we would have created the finish that Rob desired, you recall he was after a show car, not typical "pebble beach " standard but more the highest quality street rod type car that he had his heart set on.

In order to achieve that we would have reworked that primed finish most likely carrying out further mods as Rob requested them. I believe we can avoid any further unnecessary work and go with the primer you saw by checking and reworking with what we have there. This will result in an excellent road car the standard of which would surpass most cars in the club car park, however it doesn't create perfection, this is not a statement to alarm or protect myself but merely reflect our conversation. If you recall the red 911 Targa at the entrance to the works, that car had a similar approach and the finished article would be as good.

This is for a solid or non metallic finish as discussed.

The tank neck to be fitted and working satisfactorily, the deck lid to have the alloy louvered skin fitted. All hinges painted, locks and panels fitted.

BUT, at the time you left we hadn't seen the bumper so this does not cover them, they will be in the storage containers somewhere, worry not but I cannot recall their condition so a further allowance should be made for them, just6 fitting two GT deco strips can take a day and a half so allow at least 20 hours in total for work to the bumpers, I can investigate this further and estimate the time required.

That ends the work detail covered by this estimate I think but please forgive me if I've overlooked anything we discussed earlier.

All the above work would take 141 hours to complete @ £30 per hour,

broken down as

check, rectify and prepare for refinishing 42hours

same to interior 8hours

oven time 16hours

hanging panels, machine polishing etc 16hours

work under bonnet 12hours

work in engine comp 7hours

work to underside 22hours

finish engine cover 8hours

waxoiling 6hours

mechanical parts removal and refitting 6hours

paint and material charges would be £680 for Porsche approved materials [Glasurit, Wurth and Tereson]

If this appeals please let me know and I'll quickly revisit the car and check over the figures and get back to you, as truthfully you've spent longer with the car in the last two years than I have !! and I really need to go through the fine details harder but I wanted to get some figures over to you as promised.

I hope this isn't too confusing, please let me know your thoughts,

25/02/2004

kind regards
Bruce

25th September 2004

Paul,

Find enclosed the Pro Forma you asked me for and an appraisal of what I believe is the current the situation.

With regard to the Track rod ends: -

Having looked again at these – they are certainly not from the usual source.

The VW ones that are on the market are now supplied with Nylock Nuts whereas these have Castle Nuts and, of course the stud is drilled for a split pin

Whatever, these are the best that are currently available unless we look for good used old ones

You still require: -

2 x Brake Reservoirs (Already in your possession)	£77-20
2 x Door Switches	£39-50
1 x set of Track Rod Ends (German)	£119-80
1 x Rear Grill Seal	£5-00
2 x Front Bump Stops	£36-00
1 x Rear Lid cable	£10-95
1 x Handbrake Spring	£4-00
2 x Heater Cables	£20-70
1 x Light Switch with Bezel (Used – No Knob)	£50-00

All above prices are less 10%

Credit for returned Core Brake Shoes

(£40-00)

Other Points to sort out

5/3
204.00
224.00

Paul find enclosed the couple of bits you require

1 x Washer bag	£5-50
1 x Set of Bonnet Straps	£65-00
Postage	£3-50
TOTAL	£74-00

PAID

Please make cheque payable to J Tharme

Please note that the Alli ends are anodized so that they will not corrode and the Screws are St / St for the same reason

Be very careful about marking out the positions of the straps

And be aware that the straps go MUCH further up the bonnet than you may think –
TO AVOID THE DOUBLE SKINNING

What I did was to put a layer of masking tape on the outside of the bonnet and then took a piece of battening and drilled a hole in it – A tight fit for a pencil

The hole for the pencil was positioned the same distance from one end of the batten as the inner most part of the double skinning.

You can then run the edge of the batten around the edge of the bonnet and scribe the actual position of the double skinning onto the masking tape

(TAKE YOUR TIME)

MIKE

7th December 2004

Dear Paul.

Enclosed are the bits of wire you required.
Also you have a big Brucie bonus of a spare wiring diagram I found.
Please use the diagram and return it to me, as it is my spare.

The wire I have sent you is all I have in those colours unless I cut up
a complete loom which you appreciate I can't do.

Can you stick a cheque in the post for £24.00 made payable to MISS
J THARME. This is £5.00 for each length of wire and a bit of P&P.

All the best

Paul.

Danny Sullivan

Dear Danny:

As per our conversation Friday afternoon, please find enclosed two 356 headlight hockey masks. As I had mentioned to you on the phone, these were made by a guy named Tony in San Clemente. The attaching hardware is also there. After you have taken a look at them, if the quality meets with your approval, kindly send me a check for \$675.00. That was my cost on the plus freight from California.

Please give me a call and tell me what you think.

All the Best

THANK YOU!

2 April 2013

Dear Danny

Porsche 356A – Engine upgrade

I managed to dig out my old records showing the engineering and parts used in the rebuild of the engine in your car that was rebuilt by me in 2003.

The engine was based on a 912 engine that has the stronger parts making it capable of being upgraded to twin spark ignition. When it was rebuilt 1720cc Shasta piston and cylinders (9.5:1CR) were used together with a Nuetek SX1 camshaft. Any engineering required was done at the same time and the flywheel was lightened. No clutch upgrade is required as the car already has a 200mm clutch.

A twin spark engine will produce better combustion that results in more mid range torque and this will make the car behave and feel like it is fitted with a 356 Carrera engine.

We can build the twin spark engine on the existing bottom end but the best results would be achieved if we replaced the camshaft and increased the compression ratio as well.

It's obviously quite difficult to give an accurate estimate for the engine upgrade before seeing the engine again, but I have done my best to be accurate and given you a couple of options to consider.

As the engine has been rebuilt for some time and the best option for the upgrade would be a new camshaft as well so in Option 2 I have allowed time and parts to split the case and replace the bearings at the same time. Additionally I have added in the option for the installation of a SCAT steel crankshaft and Carillo con rods to this option as well. Although not essential these would make the engine capable of standing very hard use for long periods of time.

Option 1 - rebuild on existing bottom end

This would require the stripping of the top end only and use the existing pistons and cylinders. If we find anything unexpected is required we will report and let you know and provide an estimate.

Labour – 55 to 70 hours -

£2475 to £3150

Engineering:

Twin spark conversion of cylinder heads

£780.00

Flapper box conversion

£550.00

Parts:

Twin spark distributor	£875.00
Plug leads	£110.00
Pushrod tubes - billet alloy	£159.95
Ignition coil	£37.50
Coil bracket and mount	£25.00
Top end gasket	£58.00
Aluminum oil cooler	£385.00
Spark plugs	£40.00
Cleaners and consumables	£35.00
Engine oil	£29.00

Total - £5559.45 to £6234.45

Option 2 - rebuild bottom end with new camshaft etc.

A higher lift cam and an increase in compression ratio will result in more power and really capitalize on the benefit of the twin spark conversion.

There is obviously more time and more parts required in this option but it would result in a better engine and because it would be fully rebuilt with new bearings etc there would be less risk.

Labour - 75 to 90 hours £3375 to £4050

Engineering:

Twin spark conversion of cylinder heads	£780.00
Flapper box conversion	£550.00

Parts:

Shasta Design 10.5:1CR pistons and cylinders	£1350.00
Nuetek SX2 cam shaft	£225.00
Twin spark distributor	£875.00
Main bearings	£235.00
Rod bearings	£80.00
Con rod nuts	£28.00
Flywheel nut	£47.00
Plug leads	£110.00
Pushrod tubes - billet alloy	£159.95
Ignition coil	£37.50
Coil bracket and mount	£25.00
Top end gasket	£58.00
Bottom end gasket set	£40.00
Aluminum oil cooler	£385.00
Spark plugs	£40.00
Cleaners and consumables	£50.00
Engine oil	£29.00

Total - £8479.45 to £9154.45

Fitting SCAT billet crank and Carrilo rods will add £2570.00

Total with SCAT crank and Carrilo rods £11049.45 to £11724.45

Should you to decide to go with option 2 either with or without the SCAT crank and Carrillo rods you will have some parts that we would be happy to buy back subject to them being reusable so whatever we agree would be credited against the final invoice.

In both options the engine will be test run in our engine running rig and set up with the same carburetor jets and timing etc that we use in similar engines built by us. Final set up will be required when the engine is in the car. We would obviously be very happy to provide advice and assistance with this.

Although we always do our best to be accurate with an estimate, we cannot foresee potential problems or further work that only becomes apparent when work is in progress. The estimates are thus provided as a guide and you will be informed if we find any issues that change it.

It would be a good idea to have a small contingency to cover any unforeseen parts or labour and in this case I would suggest £350, which we will not commit you to without your prior permission.

All prices are correct at the time of writing but may be subject to change. If this happens we will of course try to advise you in advance but this is not always possible.

We will only invoice for work once it is completed.

If the engine is imported as a temporary import (IPR scheme) VAT will not be due and the work can be zero rated provided we provide evidence of it being re-exported back to the USA.

Job sheets recording all time worked on your car together with the parts used are available to view and we will provide a fully itemized invoice.

We will invoice for work when it is completed and payment is due prior to collection.

All engines rebuilt by us have a one-year or 10,000 mile (whichever comes soonest) warranty on our workmanship and all new parts supplied.

I have forward to you an email from CARS UK with the costs of shipping the engine here and returning it to you.

Please do not hesitate to ask if you have any questions or require any further information.

Yours sincerely

Andy
